

WEB TECHNOLOGIES

Development Assignment 3

Initial Database

The screenshot displays the phpMyAdmin web interface. On the left, a sidebar shows the database structure with a tree view containing: New, form_authentication, information_schema, mysql, performance_schema, phpmyadmin, and test. The main panel shows the 'contact_form' table selected within the 'form_authentication' database. A toolbar at the top includes options like Browse, Structure, SQL, Search, Insert, Export, Import, Privileges, Operations, Tracking, and Triggers. A status bar indicates 'Showing rows 0 - 0 (1 total, Query took 0.0008 seconds.)'. Below this, the SQL query 'SELECT * FROM `contact_form`' is shown with links for [Edit inline], [Edit], [Explain SQL], [Create PHP code], and [Refresh]. A filter section allows showing all rows or a specific number (25) with a search filter. The table data is displayed with columns: Name, Email, Subject, and Message. One row is visible: Nihar, nihardnp04@gmail.com, Event Invitation, and Hi, this is to invite you to an event. Below the table, there are options to check all, edit, copy, delete, and export the selected row. At the bottom, there are links for 'Query results operations' (Print view, Export, Display chart, Create view) and a 'Bookmark this SQL query' button. A console area at the very bottom shows a message: 'Let every user access this bookmark.'
